Adoptest

A test suite for documentation.

Check whether your content can be followed without guessing, and whether it agrees with the source that defines it.

THE PROBLEM

Documentation stops matching reality.

Support cost

A customer following a step that no longer exists becomes a support ticket.

AI safety

An agent citing a stale page can repeat the error at scale.

Audit evidence

Teams need to know what was verified, against what, and when.

Writer time

Writers reread pages after releases to find the few that changed.

THE SOLUTION

Test the documentation. Do not rewrite it.

Adoptest checks whether material can be followed and whether it agrees with its source.

FREE

Can this be followed?

One document. Check steps, ambiguity and sequence.

PRO

Does it agree with its source?

Compare the page with the material that defines it.

PRIME

What stays true over time?

History, supplied rules and source impact.

ENTERPRISE

Can the organization prove it?

Audit export, ownership routing, access and terms.

HOW IT WORKS

Check. Approve. Recheck.

01

Check

Compare the page with the source that defines it.

02

Approve

Save an approved baseline with a signed, hash-chained record.

03

Recheck

Nightly checks show what has changed since approval.

Coming next

Release-gated checks. One alert when a release invalidates the content.

WHY ADOPTEST IS DIFFERENT

A model reads. Only code judges.

Verified findings

Model findings must quote the page exactly. Code checks each quote and claim, discards unverifiable findings and calculates the score.

Reproducible checks

Readings are recorded and reused. Rechecking unchanged material returns the same result.

Evidence, not opinion

Checks and approvals record versions, content hashes and who signed off.

Release-gated checks are coming

Draft edits are not releases. Release-gated checks remain in development.

WHY NOW

Documentation now feeds machines.

70.5%

of developers reported outdated or inaccurate documentation as a barrier to productivity.

AI agents read and cite documentation at scale. Teams need to know which content is safe for them to use.

WHERE WE ARE

The Confluence beta is open.

Page checks	Scores, ambiguous instructions, bundled actions, sequence problems and suggested fixes.
Product comparison	Pasted tests, screen snapshots, transcripts or captions.
Space visibility	A space dashboard, approved baselines, nightly rechecks and a Word report.
10-day Pro trial	Starts on the site’s first Adoptest opening.

BUSINESS MODEL

Start with one page. Grow into a space.

Free	**One document**	Followability checks
Pro	**Source comparison**	Check documentation against the product
Prime	**Truth over time**	History, supplied rules and an impact graph
Enterprise	**Organizational evidence**	Audit export, routing, programmatic access and terms

Inside Confluence, where the documentation already lives.

TRUST BY DESIGN

Your content stays inside your platform.

Inside Atlassian’s platform

The Confluence app and model run inside Atlassian’s platform. The app makes no external network calls.

Minimal storage

Site app storage holds scores, titles, marks, daily history and approved baselines with sign-off records.

Removed on uninstall

App data is held in the site’s own app storage and removed when the app is uninstalled.

Beta contact details

Default retention is 6 months. Participants can stop calls or ask for deletion at connect@adoptest.com.

JOIN US

Documentation is becoming infrastructure.

We are building the test suite for it.

The Confluence beta is open. Let’s talk about what comes next.
